

VEHICULAR ACCESS CARD AT MAIN ENTRANCE

1. This access card is issued to control vehicular access at the entrance of Desa Impiana Condominium.
2. The card readers at the resident and exit lanes are medium range readers with a sensing range of 80cm. There are also route detectors on the floor, before and after the barrier gates.
3. You may place your card approximately 80 cm away, parallel to the card reader, without winding down the window of your vehicle. [Note: 80cm = distance from the card to reader \neq distance from car to reader]. However, the sensing range reduces depend on the type of window tinting that you used.
4. The barrier gates will only open when the route detector detects a vehicle on the floor and, it will close once the vehicle passes through the lane.
5. The controlling system comes with an anti-passback feature. The card/vehicle must complete the route of entering and exiting. Otherwise, the controller will not open the barrier gate. For example, if the controller only recorded the entry of a card, it will not allow opening of barrier gate for the same card again unless exit of the card is recorded.
 - enter – exit – enter – exitOK gate open
 - enter – exit – enter – enter..... rejected gate will not open
 - enter – exit – exit rejected gate will not open

** Please do not argue with our guard when your card is rejected.*
